EXAMINER

HEWITT II, CALVIN L

ART UNIT	PAPER NUMBER
----------	--------------

3621

DATE MAILED: 08/21/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/425,592

Applicant(s)

YU ET AL.

Examiner

Calvin L Hewitt II

Art Unit

3621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 August 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 8, 10-15, 17 and 18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 8, 10-15, and 17-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

Status of Claims

1. Claims 8, 10-15, and 17-18.

Response to Amendments/Arguments

2. Moskowitz et al. teach embedding in an application (e.g. host data stream) active hidden data (e.g. essential code resources) and control data. Specifically, Moskowitz et al. teach control data as a code resource, which performs the function of decoding an encoded resource from a data resource and as a data resource, which specifies in which data resource a particular code resource is encoded (column 6, lines 15-20). Further, Moskowitz et al. teach re-distributing the application with the license code for accessing the hidden resources (column 6, lines 32-37). Hence, it would have been at least obvious to one of ordinary skill to use any of the distribution methods identified by Moskowitz et al. (column/line 8/63-9/4) to provide copies of the application (column 6, lines 32-36). Regarding the orthogonality of error correction data to the hidden data, Rhoads teaches an embedded data stream where active hidden data is orthogonal to control data (column 52, lines 15-21), hence as the error-correction data is part of the control data, the combined prior art teaches this feature. The Examiner maintains the rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8, 10-15, and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moskowitz et al., U.S. Patent No. 5,745,569 in view of Leighton et al., U.S. Patent No. 5,949,885, Rhoads, U.S. Patent No. 6,311,214 and Barton, U.S. Patent No. 6,047,374.

As per claims 8, 12-15, and 17-18, Moskowitz et al. ('569) teach a system for securing content using digital watermarks (abstract; column/line 5/19-6/67) comprising:

- providing active hidden data comprising executable machine instructions (abstract; column 2, lines 1-20; column 4, lines 56-67)
- embedding hidden data into a host signal (column 2, lines 10-14; column 5, lines 19-39; column/line 8/56-9/4)
- transferring the embedded data signal from a content provider device to a player device (column 7, lines 1-21; column/line 8/56-9/4)

- extracting and executing the control and hidden data on the player device (column/line 5/40-6/67; column 7, lines 1-21; column/line 8/56-9/4)
- providing hidden data and control data, embedding control data prior to transmitting hidden data and using the control data to ensure errorless extractability of the active hidden data prior to executing the hidden data on the player device (column 5, lines 40-67; column 6, lines 38-67)
- securing digital content using encrypted watermarking to hide code resources that are essential to the proper function of an application (column 2, lines 1-20; column 4, lines 34-67; column/line 5/40-6/22)
- authentication data for authenticating data prior to extracting active hidden data (column 6, lines 8-67)

Moskowitz et al. also disclose a player device: with a decoder for extracting control data and an active bit stream, a correction module that uses control data and the active bit stream to ensure errorless extractability of the active bit stream, for accessing the encrypted digital watermark and executing the active bit stream (abstract; column 6, lines 36-67; column 7, lines 1-21; column 8, lines 1-19; column/line 8/56-9/4). Moskowitz et al. ('569) do not explicitly recite orthogonal signals and domains, and spectrum domains. Nor do Moskowitz et al. explicitly recite error-correction. Leighton et al. apply orthogonal signals and embedding watermarks using spectrum domain schemes (e.g. DCT) to digital content

authentication (column 5, lines 39-57; column 10, lines 44-51) while Rhoads teaches encoding watermarks in digital music (column/line 51/6-53/43). In particular, Rhoads teaches an embedded data stream where active hidden data is orthogonal to control data (column 52, lines 15-21). Regarding error correction, Barton teaches error correcting code for securing digital content (column 1, lines 25-33; column 4, lines 21-41; column/line 5/66-6/14; column 7, lines 27-32; column 11, lines 22-26) and applies an error correction algorithm to a watermark for authenticated digital content (figure 2; column 4, lines 54-67; column/line 7/55-8/27). Barton also teaches using authentication data embedded in digital content for authenticating content prior to extracting (column/line 5/50-6/54). Therefore, it would have been obvious to one of ordinary skill of the art to combine the systems of Moskowitz et al., Leighton et al., Rhoads and Barton. Moskowitz et al. direct their system to embedding digital watermarks with license information ('569, abstract) therefore, it would have been obvious to encode updated license data such as "copy never" in a domain orthogonal to the domain of the first watermark (or content data) so that it will be detectable in the continued presence of the first watermark (or content data) ('214, column 52, lines 13-21). Also, by applying the perpetual watermarking technique of Leighton et al. ('885, abstract) illicit copies and copier can be detected even if multiple persons combined to create the illicit copy. Recall, Moskowitz et al. teach hiding

code resources that are essential to the proper function of an application (column 2, lines 1-20; column 4, lines 34-67; column/line 5/40-6/22). Therefore, it would have been obvious implement the stegacipher of Moskowitz et al. ('569, column 5, lines 40-67) comprising error-correction code (column 9, lines 8-17) in order to prevent users from enjoying an unauthorized but fully functional, error-free end-product or identifying changes in content ('374, column 4, lines 21-41; column 11, lines 22-26).

As per claims 10 and 11, Moskowitz et al. teach securing digital content using encrypted watermarking to hide code resources that are essential to the proper function of an application (column 2, lines 1-20; column 4, lines 34-67; column/line 5/40-6/22) and Barton teaches error correcting code for securing digital content (figure 2; column 1, lines 25-33; column 4, lines 21-41; column/line 5/66-6/14; column 11, lines 22-26). Neither reference explicitly recites orthogonal signals and domains, and spectrum domains. Leighton et al. apply orthogonal signals and spectrum domain analysis to digital watermarking (column 5, lines 39-57; column 10, lines 44-51) while Rhoads teaches encoding watermarks in digital music (column/line 51/6-53/43). Therefore, it would have been obvious to one of ordinary skill of the art to combine the systems of Moskowitz et al., Barton, Leighton et al. and Rhoads. Both Moskowitz et al. and Barton teach methods for embedding digital watermarks with content-related information ('569, abstract;

'374, figure 2) therefore, it would have been obvious to encode updated content data such as "copy never" in a domain orthogonal to the domain of the first watermark (or content data) so that it ["copy never" message] will be detectable in the continued presence of the first watermark (or content data) ('214, column 52, lines 13-21). Also, by applying the perpetual watermarking technique of Leighton et al. ('885, abstract) illicit copies and copier can be detected even if multiple persons combined to create the illicit copy ('885, column 2, lines 13-22).

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Calvin Loyd Hewitt II whose telephone number is (703) 308-8057. The Examiner can normally be reached on Monday-Friday from 8:30 AM-5:00 PM.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, James P. Trammell, can be reached at (703) 305-9768.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
c/o Technology Center 2100
Washington, D.C. 20231

or faxed to:

(703) 305-7687 (for formal communications intended for entry and after-final communications),

or:

(703) 746-5532 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

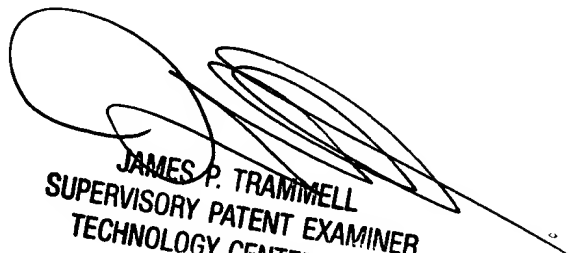

Hand-delivered responses should be brought to Crystal Park 5, 2451 Crystal Drive, 7th Floor Receptionist.

Art Unit: 3621

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-1113.

Calvin Loyd Hewitt II
